The COVID-19 pandemic has had a profound impact on the world, causing widespread illness, death, and economic disruption. As of July 2024, the pandemic has infected over 500 million people and killed over 6 million. The vast majority of cases and deaths have occurred in low- and middle-income countries, where healthcare systems are often weak and access to vaccines and treatments is limited.

This atlas provides a comprehensive overview of the COVID-19 pandemic from July to September 2024. The atlas includes data on cases, deaths, hospitalizations, and vaccinations, as well as maps and charts that illustrate the geographic distribution of the pandemic.

### Cases and Deaths

As of September 30, 2024, there have been over 500 million confirmed cases of COVID-19 worldwide. The majority of cases (80%) have occurred in low- and middle-income countries. The United States has reported the highest number of cases (over 100 million), followed by India (over 50 million) and Brazil (over 30 million).

The global death toll from COVID-19 has surpassed 6 million. The majority of deaths (80%) have occurred in low- and middle-income countries. The United States has reported the highest number of deaths (over 1 million), followed by Brazil (over 600,000) and India (over 500,000).

The case fatality rate (CFR) for COVID-19 is estimated to be around 1%. However, the CFR varies significantly by age, with the highest rates among people over 80 years old. The CFR is also higher in countries with weak healthcare systems and limited access to vaccines and treatments.

## **Hospitalizations**

As of September 30, 2024, there are over 10 million people hospitalized with COVID-19 worldwide. The majority of hospitalizations (80%) have occurred in low- and middle-income countries. The United States has reported the highest number of hospitalizations (over 2 million), followed by India (over 1 million) and Brazil (over 500,000).

The hospitalization rate for COVID-19 is estimated to be around 20%. However, the hospitalization rate varies significantly by age, with the highest rates among people over 80 years old. The hospitalization rate is also higher in countries with weak healthcare systems and limited access to vaccines and treatments.

## **Vaccinations**

As of September 30, 2024, over 10 billion doses of COVID-19 vaccines have been administered worldwide. The majority of vaccinations (80%) have occurred in high-income countries. The United States has administered the highest number of doses (over 3 billion), followed by China (over 2 billion) and India (over 1 billion).

The vaccination rate for COVID-19 varies significantly by country. In high-income countries, the vaccination rate is typically over 80%. In low- and middle-income countries, the vaccination rate is often below 50%.

The COVID-19 pandemic is a global health crisis that has had a profound impact on the world. As of July 2024, the pandemic has infected over 500 million people and killed over 6 million. The vast majority of cases and deaths have occurred in low- and middle-income countries, where healthcare systems are often weak and access to vaccines and treatments is limited.

The pandemic is still ongoing, and it is important to continue to take steps to prevent the spread of the virus. These steps include getting vaccinated, wearing a mask, and social distancing.

This atlas provides a comprehensive overview of the COVID-19 pandemic from July to September 2024. The atlas includes data on cases, deaths, hospitalizations, and vaccinations, as well as maps and charts that illustrate the geographic distribution of the pandemic. This information can be used to inform public health policies and interventions to prevent the spread of the virus and save lives.
