The Modern System of Ophthalmology MSO is a comprehensive textbook that covers all aspects of ophthalmology, including squint and orthoptics. The MSO is written by a team of leading ophthalmologists and orthoptists, and it is considered to be the definitive reference on the subject.

The MSO chapter on squint and orthoptics provides a detailed overview of the theory and practice of these disciplines. The chapter begins with a discussion of the anatomy and physiology of the eye, and it then describes the different types of squint and their causes.

The chapter also discusses the diagnosis and management of squint. The diagnosis of squint typically involves a comprehensive eye examination, which may include tests such as visual acuity testing, cover testing, and funduscopy.

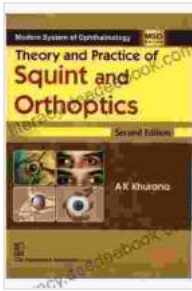

The management of squint depends on the type of squint and its severity. Treatment options may include eyeglasses, eye exercises, and surgery.

Orthoptics is a type of therapy that is used to treat squint and other eye alignment problems. Orthoptics involves a series of exercises that are designed to improve eye coordination and alignment. Orthoptics can be performed in the office or at home, and it is typically a long-term treatment.

The MSO chapter on squint and orthoptics is a valuable resource for anyone who is interested in learning more about these disciplines. The chapter provides a comprehensive overview of the theory and practice of squint and orthoptics, and it is written by a team of leading experts in the field.
